CAREFULLY READ THROUGH ALL INSTRUCTIONS

Always ensure that your bath is installed by a competent, qualified plumber.

Each bath is packaged in a high-quality crate and wrapped in a layer of protective cardboard covering.

Carefully remove the bath from the crate, taking care not to drag or scratch any part of the baths exposed surface.

Flexible waste connector kit. This component is always supplied together with the bath.

Click-clack waste. Insert the waste through the aperture and seal in place using a silicon sealant.

Be careful not to over tighten back nut.

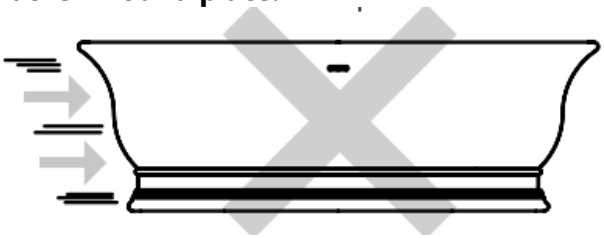

NB. Do not seal with window putty!

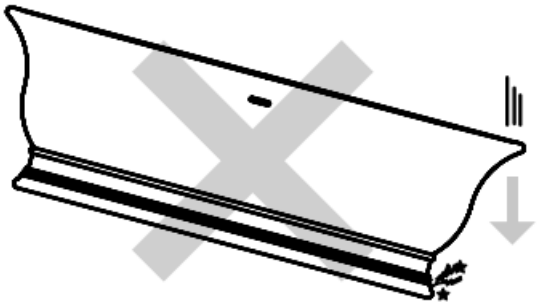

Ensure the supplied flexible waste connector kit is securely connected to the bath and waste outflow system before positioning the bath.

sales@ibcproducts.co.uk

NB. Do not drag the bath over any surface, but rather lift and place.

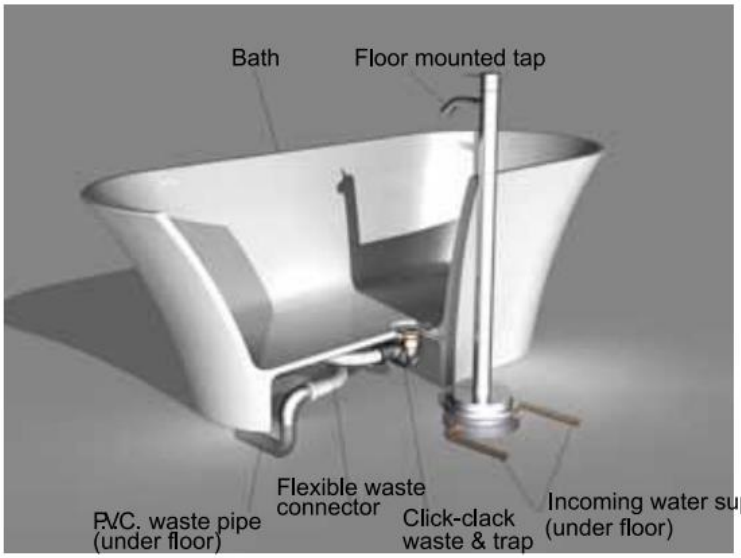

NB. Do not drop the bath!

- Always protect the surface when handling or installing/ assembling – cardboard or an old blanket provides adequate protection on the floor.
- Try and avoid getting cement, grit, sand or masonry products onto the surface. Prevention is better than cure.
- Always protect and cover the bath during the installation process and construction phase of your bathroom – other trades will damage the bath if no precautions are taken.
- Provide the bath to construction sites at the correct time as storage on site can lead to damages.
- Never use buff tape directly onto the surface. If inspection and repackaging is required remember to avoid taping directly onto the surface.

Example of a typical installation.

(Please note the type of bath & tap shown may be different from the product supplied)

CARE AND MAINTENANCE

- Clean your bath with a soft cloth and warm soapy water.
- Stubborn marks and fine scratches may be removed with the purple abrasive pad provided with your bath.
- Always run hot and cold water simultaneously into your bath.
- Mixed water must be delivered to the lowest point of the bath floor and not onto the walls.
- Avoid all contact with strong chemicals, abrasive cleaning products and solvents (i.e., stain removers, chrome bathroom cleaners, nail varnish removers, etc.).
- Do not use hair dyes in the bath as the colouring chemicals may permanently stain the surface of the bath.

If the bath is used in an area that experiences high limescale formation due to excessive water hardness please follow the instructions for prevention and removal below.

- Clean your bathtub often to prevent any kind of dirt and lime scale deposits from forming.
- Your bathtub should be cleaned regularly by means of a mild detergent such as washing up liquid, applied with a soft cloth. **NB. Rinse well with warm water afterwards.**
- For the removal of stubborn lime scale, we recommend the use of regular household white vinegar.
- Soak the affected areas with vinegar (using a spray bottle) and allow to stand for at least an hour. The longer you leave the vinegar to work, the more effective it will be in removing the lime scale deposit.
- Lightly sand the area with the purple pad provided until all the lime scale is removed.
- **NB. Rinse the bath thoroughly to eliminate any cleaning residue.**
- Follow our normal Care and Maintenance instructions for daily use.
- Do not use any abrasive detergents or steel wool as these may damage the surface of your bath.
